

ABENA®

Gloves

Examination . Surgical . Protective

Gloves

Abena's expert knowledge and experience help you select the best glove for specific needs.

The most important parameter when choosing a glove is the intended application of the glove and the consequent need for protection against various risks. Therefore, Abena's gloves concept covers a wide range of medical gloves as well as protective gloves.

Choosing an Abena glove is your guarantee that all relevant standards are met and additional tests are made.

Legislation

It can be difficult to understand the legislation for the labelling and classification of gloves. Below we shortly explain the relevant directives and standards for gloves sold by Abena.

For further information please go to www.abena-gloves.com

General

The CE Mark indicates a product may be legally offered for sale in any country within the European Union.

The sale of gloves in the EU requires that they are CE-labelled. Gloves can be CE-labelled as a medical device, or as a personal protective equipment, or – according to the new declaration for medical device – as both.

If a glove is CE-labelled as both medical device and protective clothing it needs to comply with both directives described below.

What is the difference between a medical glove and a protective glove?

A medical glove is defined as: a glove intended for use in the medical field to protect patient and user from cross-contamination.

A protective glove is defined as: Personal protective equipment, which protects the hand or part of the hand against hazards. It can additionally cover part of the forearm and arm.

Which standards should the gloves comply with?

The medical gloves must comply with the Medical Device Directive (MDD 93/42/EEC). To prove this, the gloves are tested according to several harmonized standards:

- EN 455-1: Medical gloves for single use – Part 1: Requirements and testing for freedom from holes.
- EN 455-2: Medical gloves for single use – Part 2: Requirements and testing for physical properties.
- EN 455-3: Medical gloves for single use – Part 3: Requirements and testing for biological evaluation.
- EN 455-4: Medical gloves for single use – Part 4: Requirements and testing for shelf life determination.

The protective gloves must comply with the requirements of the directive for Personal Protective Equipment (89/686/EEC). The standards which apply to protective gloves are among others:

- EN 420: Protective gloves – General requirements and test methods.
- EN 374-1: Protective gloves against chemicals and micro-organisms – Part 1: Terminology and performance requirements.
- EN 374-2: Protective gloves against dangerous chemicals and micro-organisms – Part 2: Determination of resistance to penetration.
- EN 374-3: Superseded by EN 16523-1.
- EN 16523-1: Determination of material resistance to permeation by chemicals - part 1: Permeation by liquid chemical under condition of continuous contact.
- EN 388: Protective gloves against mechanical risks.

Allergies

Facts about Allergy!

Repeated exposure to the same substance may cause allergy.

This applies to gloves as well. Remember that skin irritations may be caused by several other factors than the use of gloves.

Latex allergy (Type I allergy)

The problem of latex allergy is widely debated. This has resulted in an exaggerated fear of latex gloves. Actually, only an estimated 1% of the population are affected by intolerance to latex.

Intolerance to latex is not manifested by the appearance of local skin rashes but rather in symptoms such as sneezing, running nose, general discomfort, hot flushes, an itchy skin condition etc. The severity of latex allergy varies and at worst, it can lead to anaphylactic shock, which is potentially fatal. This, however, is rarely seen.

There are some indications of intolerance to latex. People already suffering from some kind of allergy (asthma, hay fever) are automatically at risk. People allergic to the following foods are also at risk of being intolerant to latex gloves: nuts, avocados, kiwi fruits, passion fruits, bananas, tomatoes, potatoes, carambolas, coco nuts, papayas, peaches, pineapples, melons, figs, peanuts, and curry powder.

Repeated exposure to latex proteins may cause latex allergy. People using powdered gloves are exposed to airborne latex proteins because they bind to the powder, and the level of latex proteins are much higher in a powdered glove than a powder free glove. For this reason we do not recommend the use of powdered gloves, but rather powder free latex or nitrile gloves for frequent users of disposable gloves.

Contact allergy (Type IV allergy)

The production of gloves is complicated and requires the use of different chemicals. The content of chemicals in the final product is reduced to a minimum, however, as the gloves pass through a number of rinsing processes.

Abena gloves are produced exclusively by suppliers implementing proper rinsing procedures in the production process. Traces of chemical substances in the final gloves are inevitable and though these are not allergenic in itself, repeated exposure to the same substance may cause allergy. Skin irritations and allergy caused by these chemicals are termed contact allergy and should not be confused with latex allergy. The chemicals mentioned are also called accelerators or rubber chemicals.

The contact allergy will occur where there is contact with the glove – red rashes on the hands.

Abena Glove Range

Definition:

“ Gloves intended for use in the medical field to protect patient and user from cross-contamination. ”

Nitrile gloves are made from synthetic rubber suitable for many applications. The strong nitrile material makes the gloves very easy to slide on. Contains no latex proteins. A safe alternative for people with latex allergy.

Latex gloves are made from natural rubber tapped from controlled latex tree plantations. The great elasticity of the material makes the latex gloves highly flexible and provides excellent fit to the hand.

Vinyl gloves are made from PVC and plasticizers and offer an economical solution. Vinyl gloves are ideal for use in a shorter period of time in low risk situations.

CLASSIC and EXCELLENT

Each type of material – Nitrile, Latex and Vinyl – is divided into **CLASSIC** for optimal use and **EXCELLENT** for special purposes or enhanced protection.

How to choose the right glove?

Application:	Nitrile	Latex	Vinyl
Patient care	R	R	S
Body fluids including blood	R	R	NS
Cytostatica (chemotherapy)	R	NS	NS
Oil based creams including hormone creams	R	NS	NS
Short cleaning	R	R	R
Low chemical protection	See product data sheets		
Food handling	R	R	S*

* Only for non-fatty foods

R Recommended for use **S** Suitable for use **NS** Not suitable for use

Definition:

“ Personal Protective equipment, which protects the hand or part of the hand against hazards. It can additionally cover part of the forearm and arm. ”

Protective Gloves

Disposable gloves applicable for various settings like industrial use, food handling and cleaning. For minimal risk only.

Household re-usable gloves for low and high risk chemicals and food handling.

Working gloves including various inner gloves and various dipped and knitted gloves.

Colour Coding

Abena's medical gloves are available in 6 different sizes ranking from XS-XXL. In order to make it easy for our customers to identify the right size, we have designed the glove dispenser boxes in different colours. Each colour symbolizes a specific size.

Medical Examination Gloves

Nitrile

The EXCELLENT range offers:

- Thicker and stronger gloves with additional tests on chemicals and cytostatica.
- An accelerator-free version suitable for people with contact allergy (Type IV).

When to use nitrile gloves?

Application:	Nitrile
Patient care	R
Body fluids including blood	R
Cytostatica (chemotherapy)	R
Oil based creams including hormone creams	R
Short cleaning	R
Low chemical protection	<i>See product data sheets</i>
Food handling	R

R Recommended for use **S** Suitable for use **NS** Not suitable for use

Did you know?

Nitrile gloves are made from Nitrile Butadiene Rubber (NBR). NBR is also known as synthetic rubber and the gloves are widely used due to their excellent protective features and no content of latex proteins.

Protective Gloves

The PROTECTIVE GLOVES range offers:

- **Disposable protective gloves**
are meant for minimal risk applications. They are available in various materials such as nitrile, latex, vinyl and different kinds of PE.
- **Household gloves**
are ideal for cleaning tasks and suitable for food handling. Some offer protection against different types of chemicals.
- **Working gloves**
cover different qualities of cotton gloves, knitted and dipped gloves for various applications.

How to choose the right glove

Depending on the application, there are different options for choosing the right glove. If you do not find the glove that you are looking for, please contact us, as we are constantly developing this range based on your needs and in close cooperation with our partners.
